Results-driven software engineer with extensive experience in full-stack and backend development, specializing in AI, cloud computing, and scalable software solutions. Adept at designing, developing, and deploying applications that enhance user experiences and operational efficiencies. Passionate about AI-driven innovations and improving system performance through modern engineering practices.

Skills

- **Programming Languages:** C#, JavaScript, TypeScript, Go
- **Web Development:** React, Angular, .Net Core, Blazor, Entity Framework, Dapper
- **Cloud & DevOps:** Azure, AWS, Docker, Kubernetes, Terraform, CI/CD pipelines
- **Databases:** PostgreSQL, MySQL, MS SQL, MongoDB, Redis

Experience

JAN 2023 – PRESENT
Lead Software Engineer | Nomad Health | New York, NY

- Designed and built scalable backend services utilizing .Net Core, powering travel nurse job postings, candidate applications, and employer interactions.
- Developed high-performance RESTful APIs and GraphQL endpoints to support React front-end application and integrated third-party authentication (OAuth, JWT) for secure user access.
- Implemented event-driven architecture with Kafka, ensuring real-time updates and efficient background job processing.
- Engineered a scalable MS SQL data model, optimizing queries for fast candidate-job searches while ensuring data integrity.
- Deployed and managed cloud infrastructure on Azure, ensuring high availability and fault tolerance.
- Owned the backend architecture, delivering end-to-end features from database schema design to API implementation and deployment, enabling rapid product iterations and growth.
- Collaborated closely with front-end engineers to ensure seamless API communication and optimized performance.

MAY 2019 – SEP 2022
Senior Software Engineer | Numerade | Pasadena, CA

- Architected backend services with .Net Core and Go to support large-scale video-based learning, ensuring seamless content distribution and real-time user interactions.
- Implemented efficient data pipelines and background workers to process video uploads, transcriptions, and metadata management.
- Enhanced database performance in PostgreSQL by fine-tuning queries, leveraging indexing, and introducing caching mechanisms.
- Managed cloud infrastructure on AWS, integrating S3 for scalable storage, Lambda for automation, and RDS for high-availability data storage.

- Played a key role in delivering backend solutions end-to-end, balancing rapid feature development with long-term system reliability.

OCT 2016 – APR 2019
Full-Stack Developer | FishisFast | New Castle, DE

- Engineered logistics and package forwarding systems, ensuring efficient shipment processing and real-time tracking capabilities.
- Automated warehouse management workflows by integrating cloud-based solutions, reducing manual operations and improving fulfillment speed.
- Designed and exposed APIs that enabled seamless communication between e-commerce platforms and internal logistics services.
- Enhanced system scalability by optimizing database queries and implementing caching strategies for high-volume transaction processing.

Education

Bachelor's degree, Computer Science | Indiana State University

3.8 GPA
